

Achieve Technical Excellence In A Software Organisation

Berne, 10 March 2021

Raoul Adler

Why Does Technical Excellence Matters?

“...because all of its stuff we are talking about (digital transformation and all the rest of it) doesn't really make any difference unless you can actually deliver technology, get it into production and get things moving.” – Martin Fowler

Do the right thing

Do it effective and
efficient

Do it in high quality

Correlations

~ profits

how successfully a group with a particular purpose perform a function

See next slides...

Aspects of IT Performance

3 particular measures:

Deployment
Frequency

the frequency of deployments

Deployment
Lead Time

time from code commit to
working in prod

Mean Time To
Recover

how long it will take to get
a failed piece of code running
again

Cycle Time

Cylce Time

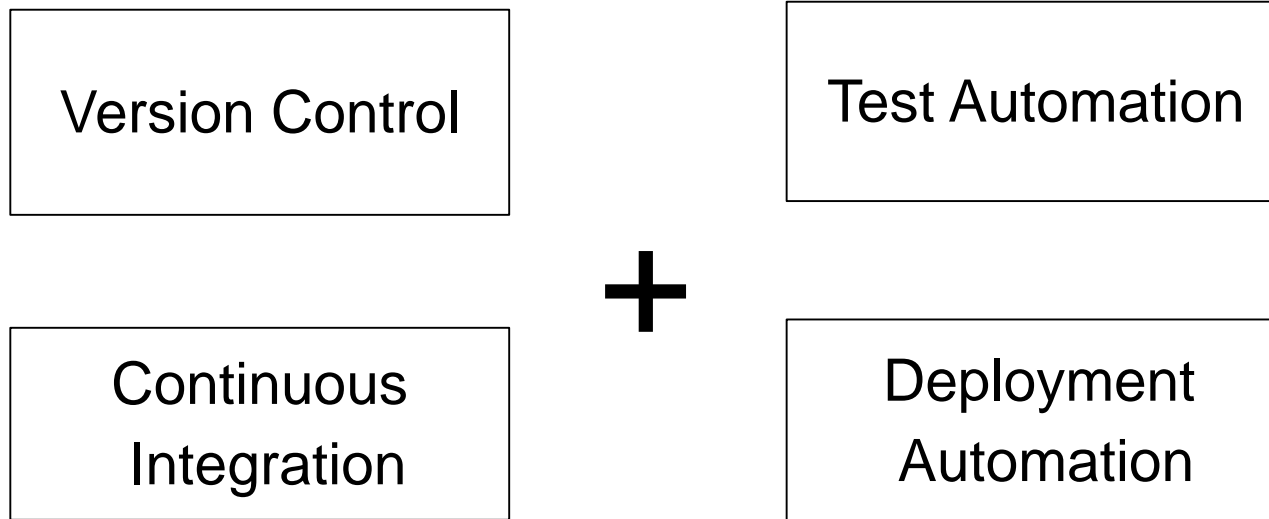

- The time it takes from the idea to the running software in production
- The possibility to gain early information
- Crucial measure

Recover Fast

- By putting stuff into production it is more important that you can realize that something is going wrong and fix it (MTTR) than to prevent the failures in the first place (MTBF)
- Today most of the organization put a lot of effort in trying to prevent that things go wrong

Continuous Delivery

- It is the ability to build software in such a way that you are always able to put the current state of your software into production
- It is a key point to reduce cycle time

Team Setup

Small

Relatively long living

- keep teams together

Business Oriented

- there must be business connectivity
- every team member should have a pass through the customer

Autonomous

- a team should have everything it needs to deliver software to the business
- ownership from UI to database
- connection to their users

Trust

Learning > Blame

Ask for Help
Without Fear

No Toxic People

Share Knowledge

Home for the evening

Integrity
(No Hidden Agenda)

Excellence On Department Level

- Understands Business
- Responsible for the software teams
- Responsible for the codebase

- Some Technical Know-How
- Responsible for the direction of travel
- Ideas, Vision

Conclusion

- Software development teams and the business must work together
- Both must understand each other
- Develop in short cycles
- Take care of the health of the team
- Apply agile processes over the entire organisation
- Try to do a better job than the others
- Have fun

A close-up photograph of a hand holding a white card. The card features the text 'THANK YOU FOR YOUR ATTENTION' in a bold, sans-serif font. The words 'YOUR' and 'ATTENTION' are highlighted in red, while 'THANK YOU' and 'FOR' are in black. The word 'ATTENTION' is underlined with a red line. The background is a blurred, light-colored surface.

THANK YOU
FOR YOUR
ATTENTION
