Mob Programming

Interactive mob programming

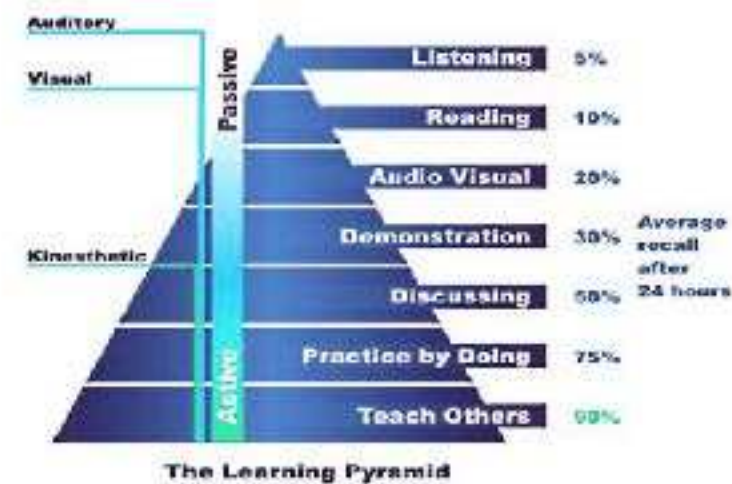

"A mob is a bus architecture for human brains. We all hear and see what we all speak and show. It's super fast for learning!"
Tim O'Hager

ROLES

- Navigator**
The person listened by the others about what to do next. He has to make the final decision if it is good for the mob.
- Driver**
The person typing on the screen if he should find the navigator and do what is asked. He is not required to think.
- Mob**
Everyone else in the room, wishing to contribute actively to the work. They observe, interact and discuss with the navigator the way forward.
- Facilitator (me)**
Sit in the back, drive the flow and jump in when necessary. This is the only role that does not rotate.

Interactive mob programming... why ?
