

I LOVE SLOGANS – my takeaways from this course

Ort, 16. Juli 2021

Samuel Hopf

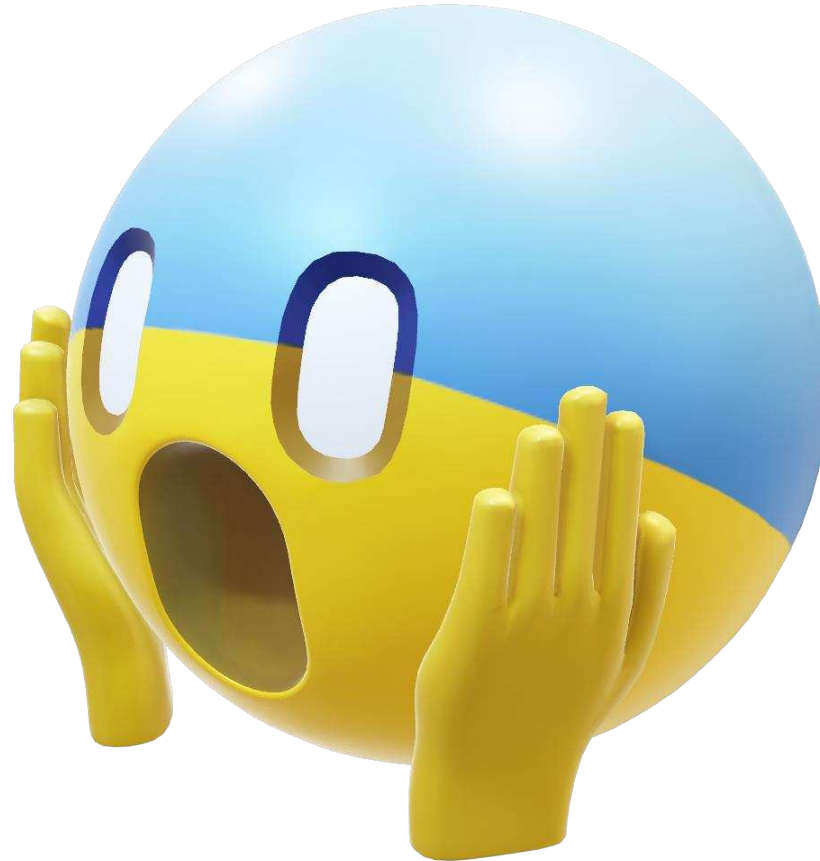

ALCOR Academy Training

Agenda

- The new stuff
- The painful «reminders»
- Things I'm not sure about yet
- Honorable mentions

Woah, that's cool! – The new stuff

The new stuff ...

TDD, the proper way

Parallel Change

red – green – COMMIT – refactor - COMMIT

RED – GREEN – REFACTOR

Practicing it was the win!

NO PRIMITIVE OBSESSION

NO ABBREVIATIONS

I may be saying the last one too much

And by the way: every time I see an else I want to get rid of it

Object Calistenics seem to be a helpful self control tool!

I should have known – The painful «reminders»

The painful «reminders»

maximize cohesion,
minimize coupling

be aware of
conscience

KISS

Keep it simple,
SMALL

And by the way!
NO ABBREVIATIONS □

**Doing it,
seeing it**

SEPARATE COMMAND AND QUERIES

TEST JUST ONE BEHAVIOUR AT A TIME

No slogans but still flying – The honorable Mentions

The honorable Mentions

- Ports and Adapters...
 - ...and Test Doubles
- Outside-In-Approach
- The mob may be an option for «foundation work»

Blue pill, red pill? – Things I'm not sure about yet

Not sure about yet

- Transformation Priority Premise
 - It's good to know why it exists but do I really need to follow a table
 - It's a table, not a slogan! 😊
- Cohesion and Coupling Metrics
 - Why should I?
- The mob
 - When we were good, we were really good ...
 - ... but there were «those days» and they were not seldom
 - I think it's highly dependent of the group (and the theme)

Time to say goodbye

- I still don't like to prepare «free topic» presentations
- If you wanna know why I didn't do a Ports-And-Adapters-Check on my sources
 - find out for yourself <https://github.com/samuelhopfle/xps>
- If you want to contact me:
 - samuel.hopf@css.ch (I may ignore it though)
- Do you have any Questions left? (don't you dare ask!!!)
