Just a simple Story for 1 Story Point

Just a simple Story for 1 Story Point

BUSINESS   **IT**
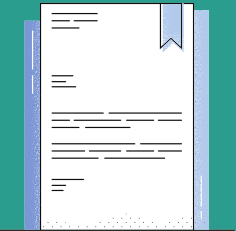

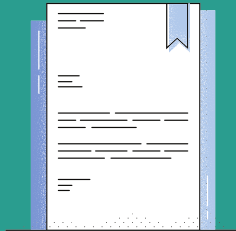

Template name:

d0126   d0126

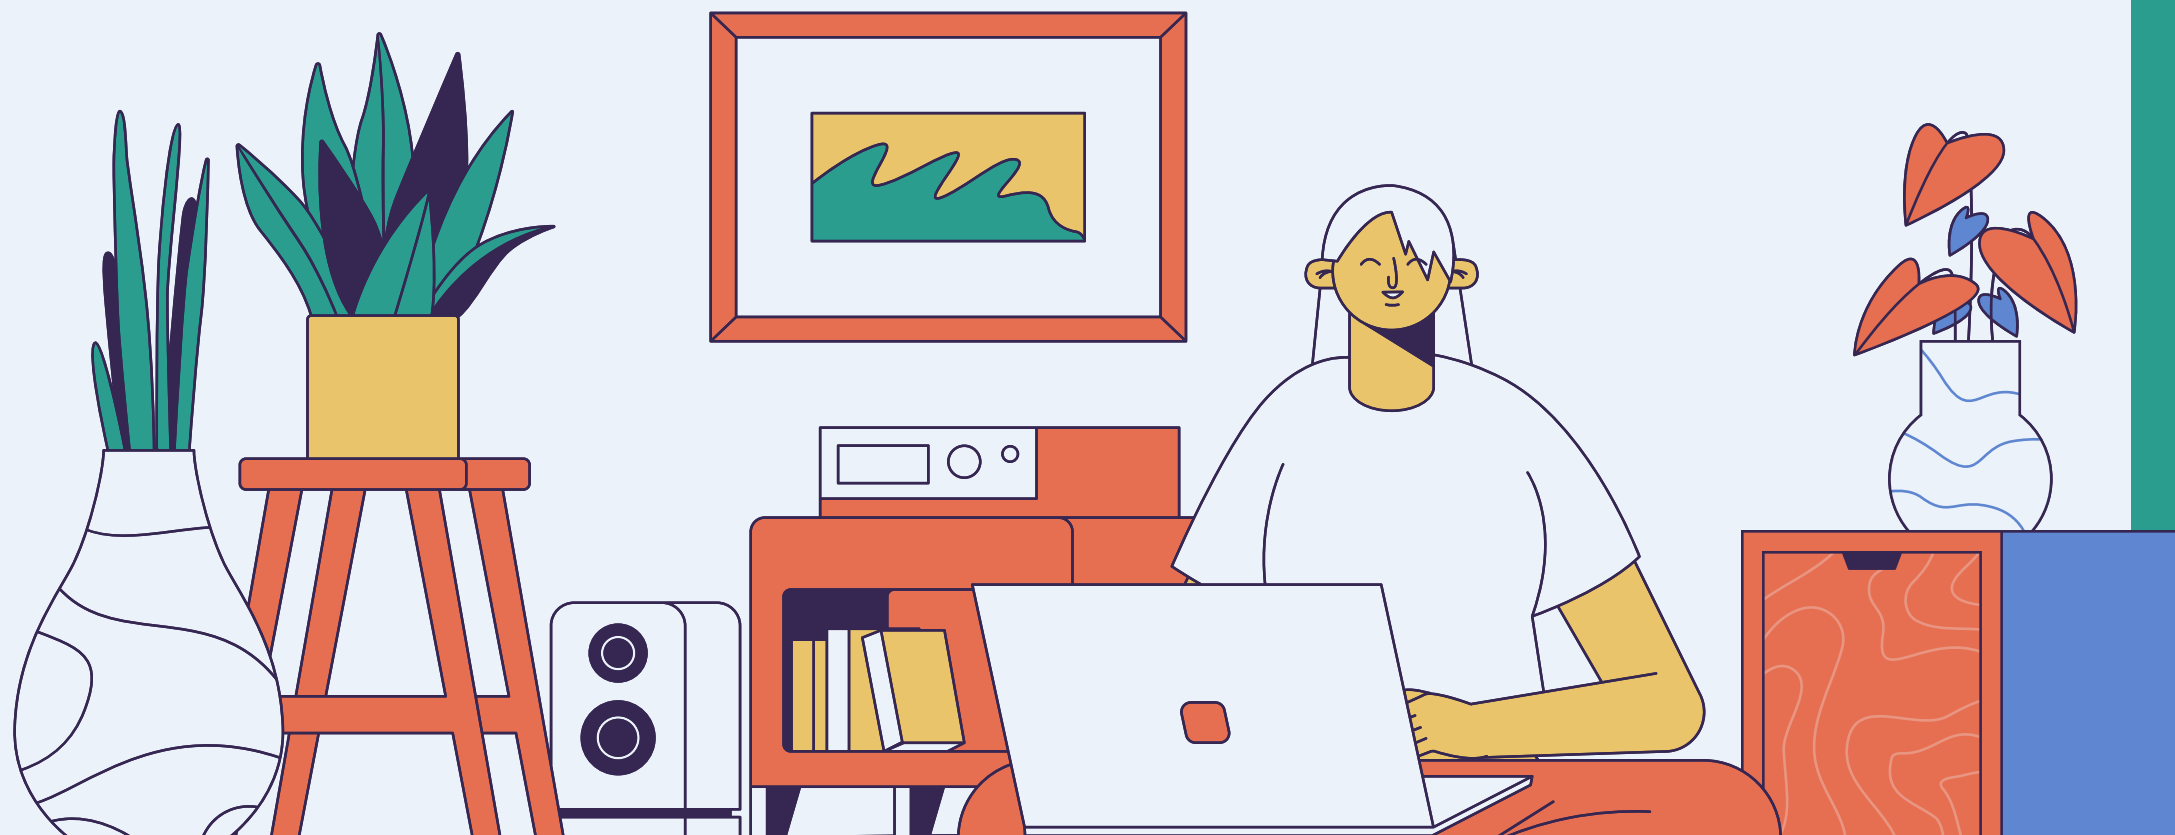

A TASK

- change the column name

- estimation - 1SP

Easy, but...

First difficulties come...

# First Review with Busness Stakeholder

First Review with Busness Stakeholder

First Review with Busness Stakeholder
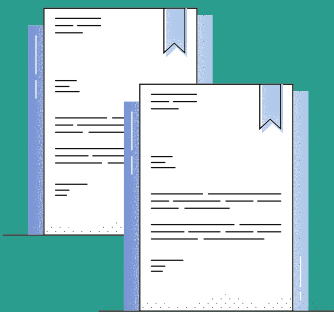

Trying to understand each other...

Just a simple Story for 1 Story Point

BUSINESS

IT

<u>d0126</u>
ABC
XYZ

<u>d0126</u>
fid011
fid012

Need to change
ONLY 1 table column
for ABC.

One single Table
definition for all
templates.

- change the column name ONLY for ABC AND only for the first table

New approach with acceptance tests could help in the future

START

Acceptance Test first

Given I create *d0126* Document of *ABC* type
   and I create *d0126* Document of *XYZ* type
when I print 2 documents
then *ABC* has changed to current Reference
  and XYZ document is equal to current Reference
  and *ABC* has 2 tables
  and *table1* has the second column "Invoices_new"
  and *table2* has the second column "Invoices_old"

Any questions or discussions?

?

Thanks for your attention and for this great course!
