

What tic said to toe

# Previous project

- Sap
- Frontend
- No testing
- Little to no pair programming
- Not much structure

# Duplicate id bug fix

- Sap development = sap problems
- Columns could be removed, added back in and reordered
- It was failing when reentering the app from the home menu
- Why? Who knows...

# It could have been so much easier...

- If I could be certain that every column that was supposed to be there was there
- If I knew that the user could still add, remove and reorder columns
- If I didn't have to manually test everything

# Testing

- Tests as a manual
- Flexible design
- Less fear

The background of the slide features several thin, curved lines in a light gray color, some solid and some dashed, creating a sense of motion or a stylized globe. A large purple speech bubble is positioned on the left side of the slide.

# New project

- More conventional development
- There is a team

# Teamwork

- How long did it take until we felt like a team?
- How effective were we as a team?
- How was the team dynamic?

# Pair programming

- Keeping everyone engaged
- Code is a team effort
- Not getting as stuck

The end...
