

Test doubles

# First thoughts on stubs

```
public async Task<string> GetTokenAsync()  
{  
    if (env.IsEnvironment("Test"))  
    {  
        return string.Empty;  
    }  
  
    // Call to token service...  
}
```

# Reflection

- Liskov substitution principal

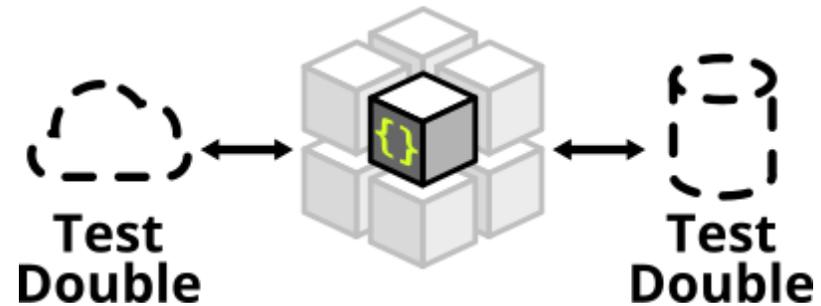

```
public interface IMyService
{
    Task<string> GetTokenAsync();
}
```

```
class MyServiceStub : IMyService
{
    public async Task<string> GetTokenAsync() => string.Empty;
}
```

# What are test doubles?

- Dummy
- Stub
- Mock

# Test Doubles: Dummy

- An empty test double

# Test Doubles: Stubs

- Queries

# Test doubles: Mocks

- Commands

# Test double libraries

From <https://nsubstitute.github.io/>

```
//Create:
```

```
var calculator = Substitute.For<ICalculator>();
```

```
//Set a return value:
```

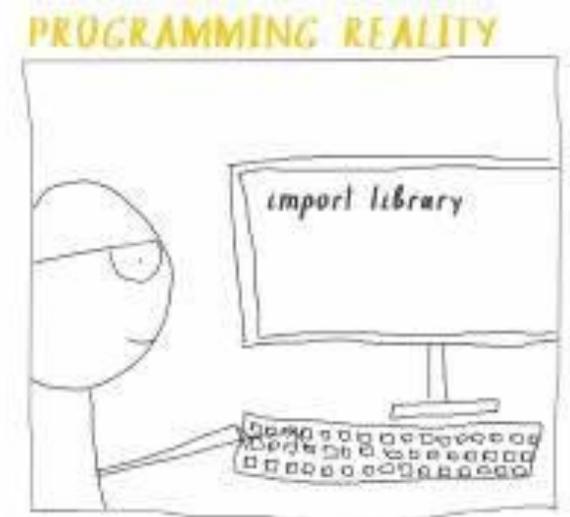

```
calculator.Add(1, 2).Returns(3);
```

```
Assert.AreEqual(3, calculator.Add(1, 2));
```

```
//Check received calls:
```

```
calculator.Received().Add(1, Arg.Any<int>());
```

```
calculator.DidNotReceive().Add(2, 2);
```
